THIS IS UNEVALUATED INFORMATION

Since the beginning of November 1951 a systematic geologic survey has been going on in the Spindleruv Mlyn (051/ G 56) - Jilernice (051/ G 45) area of the Krkonose Mountains. A number of research groups are being employed and are equipped with the very latest of instruments. The survey operations appear to be under Soviet supervision. Trucks carrying instruments and occupied by officers and enlisted personnel of both sexes wearing Soviet Army uniforms have been observed frequently in the area. Supposedly the purpose of the survey is to determine whether uranium ore is to be found in the area, and, if so, to chart the location and depth of the uranium layers.
